EDUCATION

Vellore Institute of Technology

Bachelor of Technology in Computer Science and Engineering

CGPA: **9.28**

Expected Graduation: July 2027

TECHNICAL SKILLS

Programming: JavaScript, TypeScript, Python

Frontend & Backend: React, Next.js, HTML/CSS, Node.js, Express.js, REST APIs

Databases & Web: SQL, MySQL, MongoDB, Mongoose, JSON, File Processing

Tools & Core: Git, GitHub, Postman, AWS Basics, Data Structures & Algorithms, Object-Oriented Programming

WORK EXPERIENCE

Kiran Foundation

Software Engineering Intern

Remote

Feb 2026 – May 2026

- Created and updated frontend webpages for the scholarship portal and integrated Google Forms into relevant portal pages.
- Refactored frontend code for consistent syntax and naming conventions, reviewed pull requests, merged approved changes using Git, and resolved frontend and integration issues.

AMASQIS.ai

AI Intern (Research & Analysis)

Remote

May 2025 – Dec 2025

- Completed foundational learning in AI and Python and applied the concepts to an assigned project by setting up the environment locally and executing the project.
- Prepared a technical report documenting suitable tools and approaches for the assigned project and learned the basics of deploying the project through Vercel.

KEY PROJECTS

Smart Study Assistant

 Live Demo  GitHub

React, TypeScript, Node.js, Express.js, MongoDB Atlas

Dec 2025

- Built an end-to-end study assistant supporting 40+ PDFs and other study materials through browser-based file ingestion and format-specific extraction using PDF.js, Mammoth, JSZip, and SheetJS.
- Implemented text processing, chunking, embeddings, and semantic retrieval across syllabus, study material, and previous-paper inputs, integrating Gemini through a server-side Express.js API.
- Applied Gemini JSON Schema constraints and syllabus-level instructions to generate structured study guides, MCQs, important questions, formulas, diagrams, detailed notes, and exam-oriented question papers.
- Developed the React interface with quiz scoring, answer explanations, subject management, and persistent storage using MongoDB Atlas with IndexedDB/localStorage as a fallback.

STUWEND (Study Without End)

 Live Demo  GitHub

Next.js, React, TypeScript, Tailwind CSS, Recharts

May 2025

- Developed a study-planning application using goals, deadlines, available hours, and preferences to generate structured timetables with task management and editable schedules.
- Designed the scheduling logic in TypeScript using priority-based allocation to distribute available study hours across subjects, enforce minimum session constraints, and insert breaks between sessions.
- Implemented timetable conflict resolution using interval-overlap detection and incremental 30-minute slot search to identify feasible alternatives when edited sessions conflicted with existing allocations.
- Built the interface using Tailwind CSS and shadcn/ui with Lucide React icons, and added Recharts analytics for study-hour distribution, task completion trends, completion rates, and streak statistics.

ACHIEVEMENTS

Competitive Programming: Solved 500+ DSA problems across LeetCode and achieved Codeforces Pupil (1240).

Leadership & Collaboration: Led student teams, coordinated communication for two campus placement drives, and anchored an internal Mathematics Conference.
